How to determine results using Multi-Disability Standards (MDS) for Track Events

Competitors compete against a multi-disability standard time for their classification.

Places are determined by the competitor's time calculated against a percentage of the multi-disability standard for that classification.

Competitors are then ranked from highest to lowest percentage to determine places.

Example for 100 metres - : Boy competitor with classification of T20 has a performances is 16.52 sec.

Percentage for determining results is T20 Classification MDS (from table above is 11.92) divided by competitors performance times 100.

or $(11.92/16.52) \times 100 = 72.154\%$

Please Note: Times in excess of 1 minute may need to be converted to equivalent seconds for ease of determining percentage.

How to determine results using Multi-Disability Standards (MDS) for Field Events

Competitors compete against a multi-disability standard height/distance for their classification.

Places are determined by the competitor's height/distance calculated against a percentage of the multi-disability standard for that classification.

Competitors are then ranked from highest to lowest percentage to determine places.

Example for Discus -:

Girl Competitor with classification of F55 has a performances of 14.96 metres.

Percentage for determining results is competitors performance divided by F55 Classification MDS (from table above is 17.94) times 100.

or $(14.96/17.94) \times 100 = 83.389\%$

LANSW Rules of Competition - 2019/2020 Edition
